TYRE ROTATION

TO SPREAD THE WEAR OF YOUR VEHICLE TYRES, IT IS RECOMMENDED THAT YOU ROTATE THEM APPROX EVERY 3000 MILES. IF THE SPARE TYRE IS THE SAME SIZE, TREAD AND MAKE OF THE OTHER TYRES IT IS ALSO RECOMMENDED THAT YOU INCLUDE THIS TYRE IN THE ROTATION.

CHECK FOR UNEVEN OR ABNORMAL WEAR AS THIS IS USUALLY CAUSED BY INCORRECT TYRE PRESSURE.

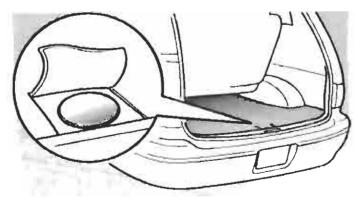

SEE DATA SHEET FOR TYRE PRESSURES.

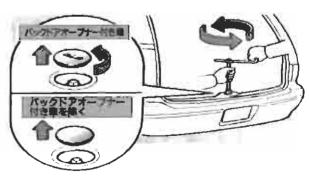

SPARE TYRE

REMOVAL:

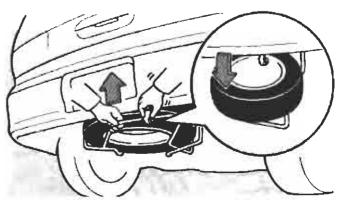

1- ROLL UP CARPET ABOVE SPARE TYRE. FOR VEHICLES WITH THE EASY CLOSE MECHANISM REMOVE THE CAP.

2- LOOSEN THE SPARE WHEEL RETAINING BOLT (THE SPARE WILL WILL SLOWLY LOWER

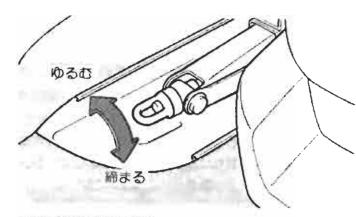

3- LIFT THE WIRE CAGE TO REMOVE RETAINING HOOK AND SLOWLY LOWER SPARE WHEEL .SPARE WHEEL WILL NOW SLIDE OUT

JUMP STARTING

IF THE STARTER MOTOR WILL NOT TURN OR IF THE ENGINE REVS ARE TOO WEAK TO START THE ENGINE, OR THE HEAD LIGHTS ARE FAINT AND THE HORN SOUND IS WEAK THE VEHICLE HAS A FLAT BATTERY AND MUST BE JUMP STARTED.

DO NOT START THE ENGINE BY PULLING OR PUSHING THE VEHICLE.

DO USE A BATTERY IN ANOTHER VEHICLE TO START THE ENGINE, BUT ONLY
USE A BOOSTER BATTERY FROM ANOTHER VEHICLE THAT IS 12V.

TO JUMP START YOUR VEHICLE:

CONNECT THE POSITIVE TERMINAL OF YOUR BATTERY TO THE POSITIVE TERMINAL OF THE BOOSTER BATTERY (USING YOUR CABLES) CONNECT THE NEGATIVE TERMINAL OF THE BOOSTER BATTERY TO A METAL PART (EARTH) OF YOUR VEHICLE.

START THE ENGINE OF THE OTHER VEHICLE AND SLIGHTLY INCREASE THE ENGINE REVS PER MINUTE.

START YOUR ENGINE.

REMOVE THE CABLES IN THE FOLLOWING ORDER:

REMOVE THE EARTH CABLE

REMOVE THE CABLE FROM THE NEGATIVE TERMINAL FROM THE BOOSTER BATTERY

REMOVE THE CABLE FROM THE POSITIVE TERMINAL FROM THE BOOSTER BATTERY

REMOVE THE CABLE FROM THE POSITIVE TERMINAL FROM YOUR BATTERY

MAKE SURE YOU HAVE THE BATTERY CHECKED AT YOUR NEAREST SERVICE CENTRE AS SOON AS POSSIBLE.

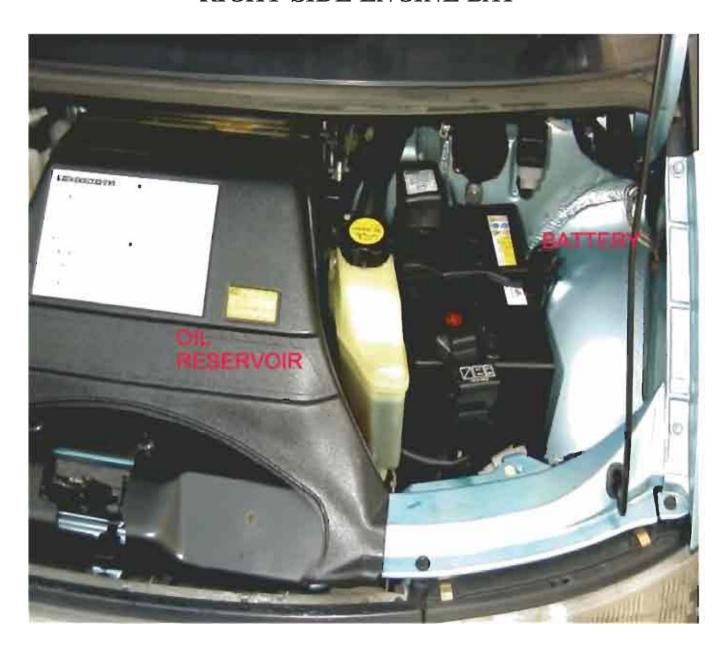

NOTE:

NEVER HAVE THE BATTERY CLOSE TO FIRE NEVER MISTAKE POSITIVE (+) AND NEGATIVE (-) TERMINALS NEVER TOUCH THE END OF THE CABLES TOGETHER.

VEHICLE MAINTENANCE

THE FOLLOWING INFORMATION COVERS A RANGE OF VEHICLE/MODELS.
THERE MAY BE SOME EXPLANATIONS FOR EQUIPMENT NOT INSTALLED IN YOUR
VEHICLE.

HOW TO CHECK THE ENGINE OIL.

MAKE SURE YOUR VEHICLE IS ON LEVEL GROUND. STOP THE ENGINE AND WAIT TO LET THE ENGINE OIL SETTLE.

PULL OUT THE ENGINE OIL DIPSTICK.

PULL THE DIPSTICK OUT AGAIN AND CHECK THE OIL LEVEL.

IT SHOULD BE AROUND THE 'FULL' MARK.
IF IT ISN'T THEN YOU NEED TO TOP IT UP.
CHECK THE OIL CONDITION: IF IT IS TOO BLACK, IT
NEEDS TO BE CHANGED, IF IT IS SLIGHTLY BROWN
IT'S OK, IF IT IS DARK BROWN BUT STILL
TRANSPARENT, IT'S ADMISSIBLE BUT BETTER TO
CHANGE IT. IF IT IS WHITE (COFFEE WITH MILK
COLOUR) IT MEANS THE ENGINE COOLANT MIXES
WITH THE ENGINE OIL BECAUSE OF SOME
INTERNAL PROBLEM. TAKE TO YOUR NEAREST
SERVICE CENTRE.

ADDING THE ENGINE OIL:

IT IS PREFERABLE TO ADD THE SAME TYPE AND BRANCH OF THE ENGINE OIL AS YOU ALREADY HAVE IN THE ENGINE.

ADD A LITTLE AMOUNT OF THE OIL, AND WAIT TO LET THE OIL POUR DOWN. CHECK THE OIL LEVEL AGAIN. IF IT IS STILL LOW ADD SOME MORE BUT DO NOT OVERFILL IT.

SET THE DIPSTICK BACK & CLOSE OIL FILTER CAP WHEN FINISHED.

HOW TO CHECK AUTOMATIC TRANSMISSION FLUID.

MAKE SURE YOUR VEHICLE IS ON LEVEL GROUND.

START THE ENGINE.

SET LEVER TO THE 'P' PARK POSITION AND LET THE ENGINE IDLE (CONTACT NEAREST SERVICE CENTRE TO CHECK).

PULL OUT THE TRANSMISSION DIPSTICK.

DRY THE DIPSTICK WITH A CLEAN RAG OR TISSUE. THEN PLACE IT BACK ALL THE WAY DOWN IN IT'S PLACE.

PULL OUT AGAIN AND CHECK THE FLUID LEVEL. IF THE ENGINE IS COOL IT SHOULD BE AT THE UPPER END OF THE 'COLD' MARK. IE THE ENGINE IS HOT THE LEVEL SHOULD BE

IF THE ENGINE IS HOT THE LEVEL SHOULD BE AT THE UPPER END OF THE 'HOT' MARK.
IF IT IS LOWER YOU SHOULD ADD SOME AUTOMATIC TRANSMISSION FLUID.
CHECK THE FLUID CONDITION: IF IT IS TOO BLACK AND HAS A BURNT SMELL - YOUR TRANSMISSION IS NOT GOING TO LAST.
IT SHOULD BE CLEAN AND TRANSPARENT.
THE COLOUR MAY DIFFER FROM RED TO BROWN, BUT IF YOU WIPE THE DIPSTICK ON CLEAN WHITE PAPER THERE SHOULD BE NO BLACK DEPOSITS, NO METAL PARTICLES AND NO DIRT LEFT.

ADDING TRANSMISSION FLUID: CHECK THE TRANSMISSION FLUID TYPE WITH YOUR SERVICE CENTRE.

ADD A LITTLE AMOUNT OF THE FLUID. WAIT FOR IT TO SETTLE. START THE ENGINE. CHECK THE LEVEL AGAIN.

ENGINE COOLANT

ALWAYS KEEP THE COOLANT LEVEL FULL. LOW COOLANT LEVEL CAUSE THE ENGINE TO OVERHEAT.

THE COOLANT LEVEL SHOULD BE BETWEEN THE 'LOW' AND 'FULL' MARKS IN THE COOLANT EXPANSION TANK. IF THERE IS NO COOLANT IN THE EXPANSION TANK AT ALL YOU SHOULD ADD THE COOLANT TO THE RADIATOR AS WELL. NOTE: NEVER OPEN THE RADIATOR OR THE EXPANSION TANK CAP WHEN

WHEN THE ENGINE TEMPERATURE IS REDUCED (A FEW MINUTES AFTER THE ENGINE HAS BEEN TURNED OFF) SIMPLY ADD A COOLANT INTO THE EXPANSION TANK TO THE 'FULL' MARK. AND INTO THE RADIATOR IF REQUIRED.

BRAKE FLUID

THE BRAKE FLUID RESERVOIR IS UNDER THE HOOD IN FRONT OF THE STEERING WHEEL. MOST VEHICLES HAVE A TRANSPARENT RESERVOIR SO THAT YOU CAN SE THE LEVEL WITHOUT OPENING THE COVER.

THE BRAKE FLUID LEVEL WILL DROP SLIGHTLY AS THE BRAKE PADS WEAR OUT. THIS IS A NORMAL CONDITION AND YOU SHOULDN'T WORRY ABOUT IT. IF THE LEVEL DROPS NOTICEABLY OVER A SHORT PERIOD OF TIME OR GOES DOWN TO ABOUT TWO THIRDS FULL, YOU SHOULD HAVE YOUR BRAKES CHECKED AT YOUR NEAREST SERVICE CENTRE AS SOON AS POSSIBLE. KEEP THE RESERVOIR COVERED EXCEPT FOR THE AMOUNT OF TIME YOU NEED TO FILL IT AND NEVER LEAVE A CAN OF BRAKE FLUID UNCOVERED. BRAKE FLUID MUST MAINTAIN A VERY HIGH BOILING POINT. EXPOSURE TO AIR WILL CAUSE THE FLUID TO ABSORB MOISTURE WHICH LOWERS THE BOILING POINT.

NOTE: NEVER PUT ANYTHING BUT APPROVED BRAKE FLUID IN YOUR BRAKES, ANYTHING ELSE CAN CAUSE SUDDEN BRAKE FAILURE.

POWER STEERING FLUID

THE POWER STEERING FLUID RESERVOIR USUALLY HAS A SMALL DIPSTICK ATTACHED TO THE CAP.

REMOVE THE CAP AND CHECK THE FLUID LEVEL. THE LEVEL SHOULD NOT CHANGE MORE THAN THE NORMAL RANGE ON THE STICK.

IF YOU HAVE TO ADD FLUID MORE THAN ONCE OR TWICE A YEAR, THEN HAVE THE SYSTEM CHECKED FOR LEAKS AT YOUR NEAREST SERVICE CENTRE. THESE SYSTEMS ARE EASILY DAMAGED IF YOU DRIVE WHILST THE FLUID IS VERY LOW. ANOTHER WARNING OF LOW POWER STEERING FLUID IS A BUZZING NOISE WHEN YOU TURN THE STEERING WHEEL AT LOW SPEEDS.

BATTERY

MOST BATTERIES ARE 'MAINTENANCE FREE' WHICH MEANS THAT YOU CAN'T CHECK THE WATER LEVEL. THIS DOESN'T MEAN THAT THERE IS NOTHING TO CHECK.

THE MAIN THINGS TO CHECK ARE THE TOP OF THE BATTERY WHICH SHOULD BE CLEAN AND DRY, AND THE TERMINAL CONNECTIONS WHICH SHOULD BE CLEAN AND TIGHT.

IF THE TOP OF THE BATTERY CONTINUOUSLY BECOMES DAMP OR CORRODED SOON AFTER CLEANING, THEN YOU NEED TO HAVE THE CHARGING SYSTEM AND BATTERY CHECKED AT YOU NEAREST SERVICE CENTRE.

BELTS AND HOSES

IN MOST CASES YOUR SERVICE CENTRE CAN CHECK YOUR BELTS AND HOSES WHEN YOU TAKE THE VEHICLE IN FOR AN OIL CHANGE. HOWEVER SOME OTHER CENTRES MAY NOT CHECK THE BELTS AND HOSES AS STANDARD IN WHICH CASE THE FOLLOWING CHECKS CAN BE MADE:

THESE CHECKS ARE BEST DONE WHEN THE VEHICLE IS COLD.

BELTS ARE USED TO DRIVE A NUMBER OF COMPONENTS ON THE ENGINE INCLUDING: THE WATER PUMP, POWER STEERING PUMP, AIR CONDITIONER, ALTERNATOR AND AN EMISSION CONTROL PUMP. SOME LATER MODELS MAY HAVE A SINGLE 'SERPENTINE' BELT THAT HANDLES EVERYTHING. YOU SHOULD CHECK THE RIBBED SIDE FOR SIGNS OF DRY AND CRACKED RUBBER. SERPENTINE BELTS ARE USUALLY SELF ADJUSTING AND VERY DURABLE. THEY SHOULD LAST ABOUT 30.000 MILES.

THE OTHER TYPE OF BELT IS CALLED A 'V' BELT AND IS ADJUSTABLE. THERE IS USUALLY MORE THAN ONE TO AN ENGINE, SOMETIMES 3 OR 4. CHECK EACH ONE FOR CRACKS AND TIGHTNESS AND HAVE THEM REPLACED IF YOU FIND ANY PROBLEMS.

SOME 'V' BELTS ARE HARD TO REACH BUT NO LESS IMPORTANT. IF YOU CANNOT REACH THESE, GET YOUR SERVICE CENTRE TO DO THEM PERIODICALLY.

HOSES SHOULD BE CHECKED VISUALLY AND BY FEEL.
YOU ARE LOOKING FOR DRY CRACKED RUBBER, ESPECIALLY AT THE ENDS
WHERE THEY ARE ATTACHED. YOU SHOULD ALSO CHECK THE ENDS FOR ANY
SIGNS OF BALLOONING.

WINDSCREEN WIPER BLADES

WIPER BLADES SHOULD BE CHANGED EVERY 6.000 TO 10.000 MILES.
WIPER BLADES WILL TEND TO STREAK WHEN THEY ARE DIRTY.
TAKE A PAPER TOWEL WITH SOME WINDOW CLEANER AND CLEAN THE RUBBER BLADE WHENEVER YOU CLEAN THE WINDSCREEN.

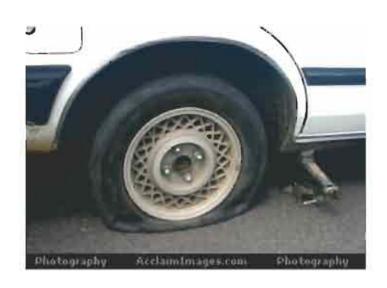

TYRES

IMPROPER TYRE PRESSURE CAN AFFECT TYRE WEAR AS WILL AS RIDE AND HANDLING.

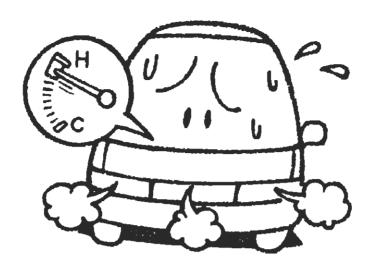

YOU SHOULD ALWAYS CHECK YOUR TYRES WHEN THEY ARE COLD.
USE THE MANUFACTURERS RECOMMENDED TYRE PRESSURES.
TYRE PRESSURE TENDS TO RISE AS YOU DRIVE DUE TO HEAT BUILD-UP.
MANUFACTURERS HAVE THIS IN MIND WHEN THEY SET THE RECOMMENDED
COLD PRESSURES, SO DO NOT LET AIR OUT WHEN THE TYRE GETS HOT.
CHECK THE TYRE AGAIN WHEN IT COOLS OFF AND YOU WILL FIND THAT THE
PRESSURE IS BACK TO WHERE IT WAS.

TYRE PRESSURE WILL CHANGE WITH THE SEASONS, SO IN WINTER MONTHS MAKE SURE THEY ARE NOT UNDER INFLATED.

NOTE: REMEMBER TO CHECK TYRE PRESSURE WHEN THE TYRE IS COLD.

OVERHEATING

IF THE TEMPERATURE GAUGE NEEDLE GOES INTO THE RED ZONE IT MEANS YOUR VEHICLE HAS OVERHEATED.

PULL OVER AS SOON AS POSSIBLE, BUT LEAVE THE ENGINE RUNNING.

GO TO THE FRONT OF YOUR VEHICLE - IF STEAM AND RADIATOR COOLANT ARE COMING OUT THE FRONT OF YOUR VEHICLE TURN THE ENGINE OFF IMMEDIATELY.

IF NO STEAM OR COOLANT IS COMING OUT OF THE FRONT OF YOUR VEHICLE, LEAVE THE ENGINE RUNNING BUT OPEN YOUR BONNET (THE ENGINE COOLS DOWN FASTER WHEN THE ENGINE IS KEPT RUNNING)

WHEN THE TEMPERATURE HAS RETURNED TO NORMAL YOU MAY CONTINUE DRIVING BUT WITH CAUTION. IT IS ADVISABLE TO CHECK FOR ANY RADIATOR LEAKS IN THE SYSTEM AND CHECK THE RADIATOR LEVEL BEFORE CONTINUING.

THE COOLANT MUST BE REPLACED BEFORE DRIVING AGAIN IF THERE HAS BEEN A LOSS.

DO NOT REMOVE THE RADIATOR CAP UNTIL THE ENGINE TEMPERATURE HAS RETURNED TO NORMAL, BE CAREFUL AS COOLANT MAY STILL BE UNDER PRESSURE.

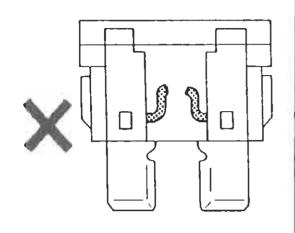

BEFORE DRIVING IT IS ADVISED TO CHECK COOLANT LEVELS
PERIODICALLY AND TO OCCASIONALLY TURN OFF AIR CONDITIONING ON
HOT DAYS.

RECOGNISING A BLOWN FUSE

IT IS RECOMMENDED THAT BEFORE REPLACING A FUSE YOU FIND OUT WHY THE FUSE SHORTED.

MAKE SURE YOU ONLY REPLACE THE FUSE WITH THE SAME AMPERAGE.

IF THIS IS NOT AVAILABLE USE A LESSER AMPERAGE.

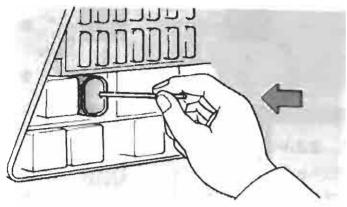

ALWAYS MAKE SURE THE IGNITION IS IN THE 'LOCK' POSITION BEFORE REPLACING A FUSE.

NOTE: IF A FUSE SHORTS AGAIN SHORTLY AFTER REPLACEMENT, GO TO YOUR NEAREST SERVICE CENTRE.

FUSE REPLACEMENT

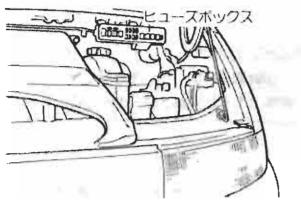

YOU MAY HAVE BLOWN A FUSE OR BULB, OR THE CIRCUIT BREAKER HAS BEEN CUT IF THE LIGHTS DO NOT WORK OR THE ELECTRICAL DEVICES ARE NOT FUNCTIONING. EVEN THOUGH YOUR BATTERY IS NOT FLAT.

RESTARTING THE CIRCUIT BREAKER

1 - PLACE IGNITION IN 'LOCK' POSITION

2 - INSERT A LONG THIN OBJECT INTO A CIRCUIT BREAKER UNTIL YOU HEAR A 'CLICK'.

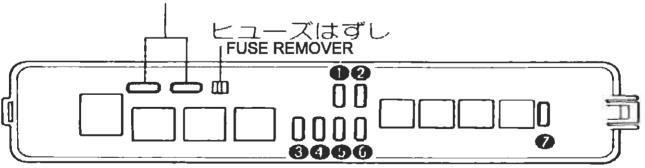

FUSE CHECK AND REPLACEMENT

1 - MAKE SURE IGNITION IS IN LOCK POSITION.

2 - FIND THE FUSE THAT NEEDS TO BE CHECKED BY USING THE CHART BELOW. REMOVE FUSE THE THE FUSE REMOVER AND CHECK WHETHER IT HAS BLOWN OR NOT. BOTH THE FUSE REMOVER & SPARE FUSES CAN BE LOCATED INSIDE THE ENGINE BAY FUSE BOX. SOME FUSES MAY NOT EXIST IN

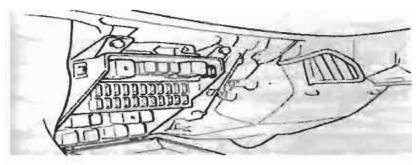

SOME MODELS.

BULB REPLACEMENT

WHEN REPLACING BULBS MAKE SURE YOU USE BULBS OF THE SAME WATTAGE.

WHEN REPLACING HALOGEN BULBS, ALWAYS WEAR CLEAN GLOVES. DO NOT TOUCH THE BULBS WITH YOUR BARE HANDS.

HALOGEN BULBS SHOULD NOT BE DROPPED OR SCRATCHED AS THIS MAY CAUSE THE BULB TO EXPLODE DUE TO THE INTERIOR OF THE BULB BEING UNDER GREATER PRESSURE.

Note: using an optional snap on wire harness adapter will simplify the wiring. Most snap on wire harness adapters have already converted and color coded the wires from the auto makers in dash wire harness to match typical aftermarket radio wire colors.

^{**} The wire colors listed in the chart above are typical for these vehicles during these years but may not be the exact colors for this vehicle. This is another reason to use a snap on wire harness adapter. **
